Get a researcher professional account for the Lung Cancer Registry and help us collect and share the data on your side effects.

The Lung Cancer Registry (www.lungcancerregistry.org) has launched our first study for patients on an immunotherapy treatment.

- Patient-Reported Outcomes (PRO) on the use of immunotherapy can help fill a gap for these new treatment modalities
- The Registry can be a part of that solution by quickly aggregating many data points in a single research-friendly platform.

How researchers can help:
- Invite all your lung cancer patients—especially those on immunotherapy—to log into the registry.
- It’s easy. Visit www.lungcancerregistry.org and sign up.

Researchers apply for a Professional Account Today! A research tool for YOU to access, view and search the de-identified data.

To view the data visit: www.lungcancerregistry.org and sign up as a researcher.

Proposals for research studies can be submitted to the Lung Cancer Registry at: registry@lungcancerfoundation.org.
